

Croma

This compact dispensing system offers accurate instant color reproduction and it is an affordable solution for automatic dispensing. It requires little space and it is ideal for small to medium scale production.

Up to

Maximum component	Dispensing valves' size	Dispensing Accuracy	ATEX IEC-EX	Average Dispensing Time	fixed Valve

GT36

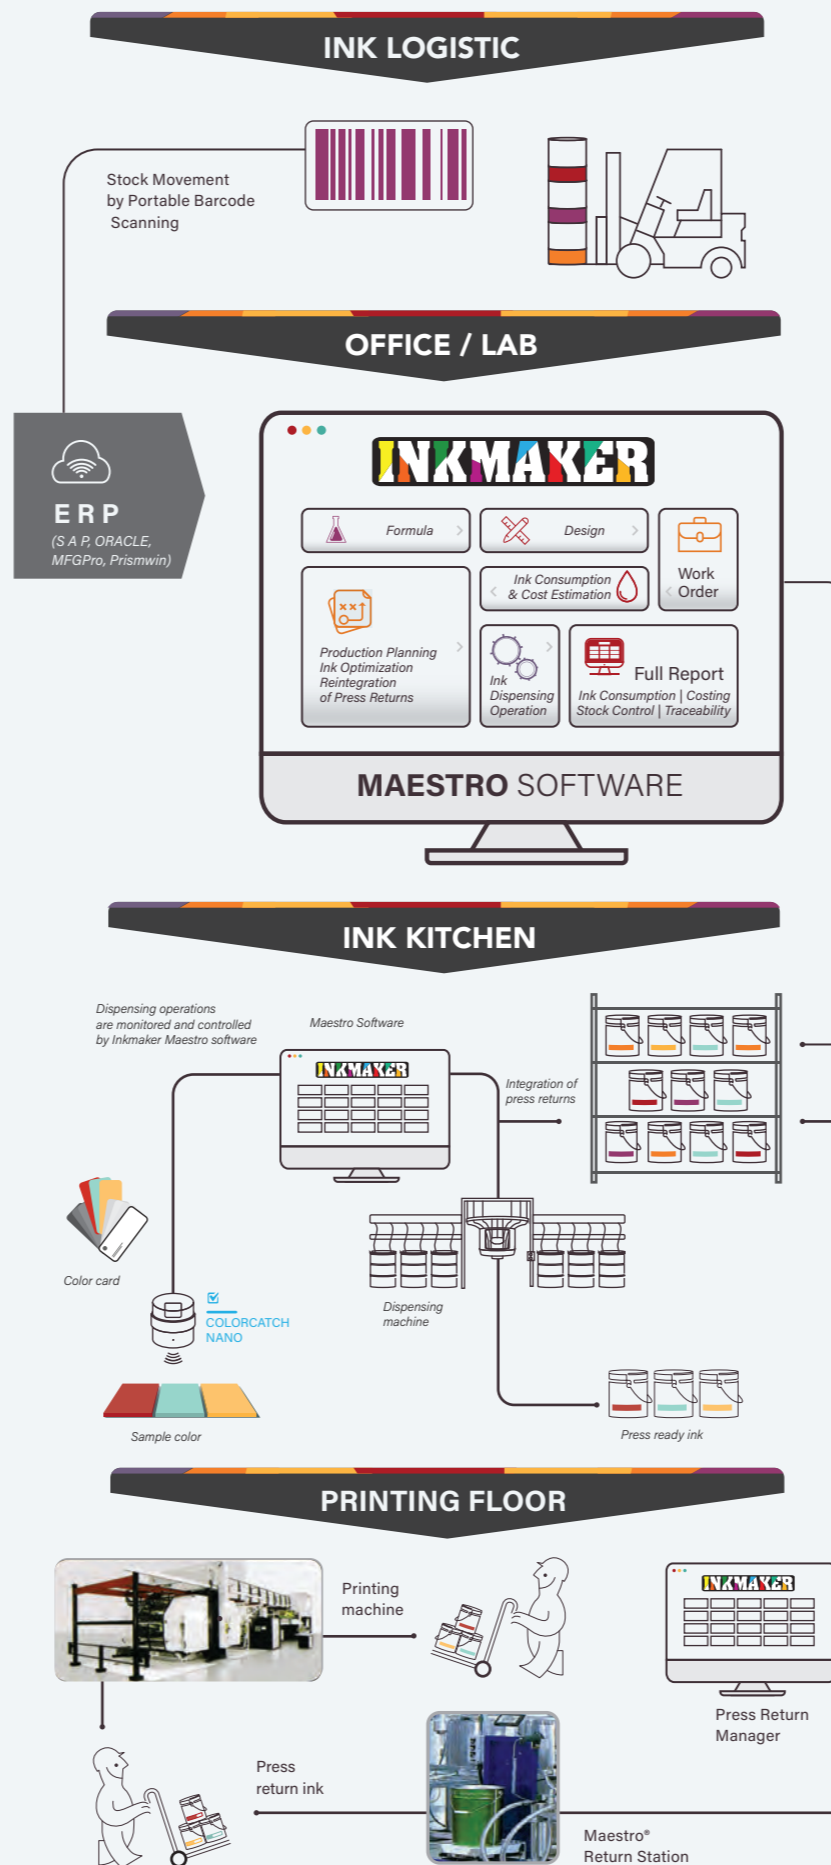

The GT36 is conceptualised to offer an affordable solution for users with moderate output requirements but with the need to handle a large number of components.

Ideal to handle more than one product range (two or more ink series) through a single dispensing head. Less investment for more flexibility!

Up to

Maximum component	Dispensing valves' size	Dispensing Accuracy	Single Point Dispensing	ATEX IEC-EX	Average Dispensing Time

Piccolo

This signature model is ideal for medium scale production. Robust Stainless Steel dispensing head with fully automatic features. New generation high speed flow valves.

Up to

Maximum component	Dispensing valves' size	Dispensing Accuracy	ATEX IEC-EX	Average Dispensing Time	fixed Valve

P-Series

Performance-wise these systems are top notch. Patented single-point dispensing, possibility to mix & match valves of different sizes to cater for different requirements, small to big batches production capability, linear variable pump speed control and fully automatic features; the P-series is the perfect choice for medium to big scale production.

*Possible only if appropriate scale is used

Narrow Web Series

HA650

UV Flexo ink

This very compact unit is an easy plug-and-play solution for the management of UV flexo ink. The system is equipped with 20 built-in ink tanks complete with agitators and with a capacity ranging from 6 to 20 ltr. It features a unique center point dispensing system and it is run by electric power only.

Up to

Maximum component	Dispensing Accuracy	Single Point Dispensing	Average Dispensing Time	Dimension	built in Storage

*Possible only if appropriate scale is used

Slider

Offset / UV Offset / UV Flexo / Hybrid

This simple maintenance design, features a row of self cleaning dispensing valves moving left to right on a linear motion. It can handle up to 20 components with single point dispensing valves and super high accuracy. Both piston and pressure plate pumps can be used to transfer offset or UV offset inks to the dispensing head. The UV Flexo configuration will use double diaphragm pneumatic pumps.

Up to

Maximum component	Dispensing valves'size	Dispensing Accuracy	Single Point Dispensing	Average Dispensing Time	Conventional Offset /UV Offset	UV FLEXO

*Possible only if appropriate scale is used

*for conventional or UV offset
